EXPERTISE

Mersen has an engineering team dedicated to customer services.

Our experts help study the best technical & economical solutions for your projects. This team can also assist our customers to produce isometric drawings in order to create a list of fittings / components.

The specification or data herein contained are only given for indication, without any undertakings whatsoever. Their publication does not suggest the matter is free of any rights whatsoever. Furthermore, due to constant evolution of techniques and norms, we reserve the right to modify, at any time, the characteristics and specifications contained in this document.

MERSEN refuses all and any responsibility concerning their use whatever the purpose or application. Any copy, reproduction or information herein contained, in whole or in part, made without MERSEN written consent, is forbidden according to the laws of France and particularly the law nr. 92-597 of July 1st 1992 relating to the copyright.

MERSEN ANTICORROSION EQUIPMENT

The Mersen AntiCorrosion Equipment activity is internationally recognized for its expertise in the design and manufacture of process equipment, manufactured from corrosion resistant materials (graphite, silicon carbide, tantalum, zirconium, PTFE).

Mersen also has an in-depth knowledge of the process technologies requiring our AntiCorrosion Equipment and can provide offers from the basic equipment only, up to skid-mounted turn-key process packages.

Since 1964, Mersen has been offering an exhaustive range of PTFE / PFA lined pipe and fittings especially designed for conveying corrosive fluids in both the chemical and pharmaceutical industries.

THE PRODUCT RANGE CONSISTS OF :

- PTFE / PFA lined pipe and fittings
- PTFE bellows (expansion joints) and compensators

PTFE / PFA POLYMERS

DEFINITION

Available lining materials for our product range are as follows :

- ▶ Virgin or anti-static* PTFE (Polytetrafluoroethylene), in accordance with ASTM D4894 & 4895 standards.
- ▶ Virgin or anti-static* PFA (perfluoroalkoxy), according to ASTM D3307** standard.

* Conductive black PTFE or PFA

** Also on request according to DIN 53455 standard

GENERAL CHARACTERISTICS

Values indicated in the following table are given for virgin PTFE and PFA. These characteristics can vary depending on the material grades from the various suppliers, the transformation process and the batch.

| PROPERTIES | UNITS | PTFE | PFA |
|---|----------------------|---------------------|------------------|
| Physical | | | |
| Density | g/cm ³ | 2.13 - 2.19 | 2.12 - 2.17 |
| Water absorption : 24h thickness 3,2 mm | % | <0.01 | 0.03 |
| Mechanical | | | |
| Tensile strength | MPa | 20 - 40 | 27 - 32 |
| Elongation at break | % | 250 - 500 | 300 - 500 |
| Modulus of elasticity under elongation | MPa | 350 - 750 | 650 - 700 |
| Modulus of elasticity under flexural stress | MPa | 440 - 670 | 590 - 700 |
| Hardness shore D mandholz | | 50 - 72 | 60 - 65 |
| Thermal | | | |
| Flame propagation | | hard | hard |
| Melting point | °C | 327 and 342 | 300 to 310 |
| Other transitions | °C | -90*, +123, * +27** | -80*, 90* |
| Maximum service temperature | °C | -200/+260 | -150/+260 |
| Temp. of deflection under load (1.82 MPa) | °C | 50 - 60 | 50 |
| Linear elongation coefficient | 10 ⁵ / °C | 10 - 25 | 12 |
| Thermal conductivity | W / m.K | 0.24 | 0.25 |
| Electrical | | | |
| Dielectric constant from 60 Hz to 107 Hz | | 2.2 | 2.1 |
| Volume resistivity | Ω.cm | 10 ¹⁸ | 10 ¹⁸ |
| Surface resistivity | Ω | 10 ¹⁷ | 10 ¹⁷ |
| Spark test (thick.mm) | kV / mm.K | 36(1) | 80(2.3) |

*amorphous phase, **crystal phase

RECEIVING INSPECTIONS

Material certificates from the PTFE / PFA powder manufacturers are checked and identified with batch numbers. On request, FDA certificates (Food and Drug Administration) can be supplied.

PTFE / PFA LINING

Mersen proposes 2 ranges of Armylor® 2:

- Armylor®2 G to operate under pressure
- Armylor®2 V to operate under pressure and vacuum

PTFE / PFA NOMINAL THICKNESS

| DN | 15 | 20 | 25 | 32 | 40 | 50 | 65 | 80 | 100 | 125 | 150 | 200 | 250 | 300 | 350 | 400 | 500 | 600 |
|----|----|----|----|----|----|----|----|----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|
| G | | | | | | | | | | | | | | | | 7,5 | 7,5 | 7,5 |
| V | 3 | 3 | 3 | 3 | 4 | 4 | 4 | 4 | 4,5 | 6 | 7 | 7,5 | 7,5 | 7,5 | | | | |

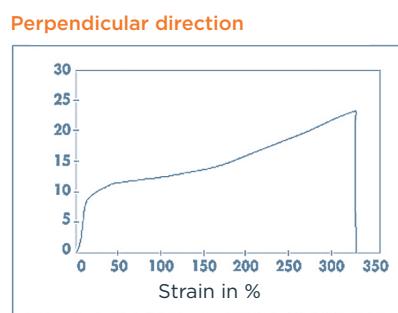

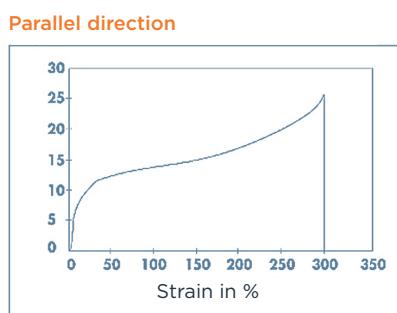

The minimal thickness of the PTFE tube is equal to the nominal minus 10% - The thickness of the flare cannot be lower than the nominal thickness, minus 20%.

TESTS ON PTFE / PFA

Physical and mechanical tests

For each manufacturing batch, Mersen checks the mechanical & physical properties.

Values for elongation at break point and tensile strength, together with regularity of the graph confirms that the liner sintering has re-established the isotropy of PTFE, which guarantees a low level of permeability.

PTFE / PFA LINING

Optimal density ensures a balance between a low permeability level and a good distortion during temperature cycles.

| | MECHANICAL PROPERTIES | | PHYSICAL PROPERTIES | |
|--|---|---|---------------------------------|---------------------------------|
| | Tensile strength | Elongation at break | Density | |
| PTFE Extruded Virgin Test according to standard | + 21 N/mm ² (// Direction) + 17 N/mm ² (L Direction) ASTM D4895 | + 250% (// Direction) + 200% (L Direction) ASTM D4895 | 2.14 - 2.19 ASTM D792 | 2.13 - 2.19 DIN 53749 |
| Antistatic Test according to standard | + 21 N/mm ² (// Direction) + 17 N/mm ² (L Direction) ASTM D4895 | + 250% (// Direction) + 200% (L Direction) ASTM D4895 | 2.13 - 2.19 ASTM D792 | 2.12 - 2.18 DIN 53749 |
| PFA Virgin Test according to standard | + 26 N/mm ² ASTM D3307 | + 300% ASTM D3307 | 2.12 - 2.17 ASTM D792 | 2.12 - 2.17 DIN 53749 |
| Antistatic Test according to standard | + 26 N/mm ² ASTM D3307 | + 300% ASTM D3307 | 2.11 - 2.17 ASTM D792 | 2.11 - 2.16 DIN 53749 |

The results comply with the ASTM F1545 standard

ANTISTATIC PTFE / PFA ELECTRICAL PROPERTIES

Transverse resistivity : < 10⁷ Ω based on the BS ISO 2878 : 2005 standard

Surface resistivity : < 10⁸ Ω based on the BS ISO 14309 : 2011 standard

Volume resistivity : < 10⁸ Ω based on the BS ISO 14309 : 2011 standard

Thanks to Mersen's expertise in lining technologies (PFA injection, extrusion of fine PTFE powders). Mersen has optimised its manufacturing processes and PTFE / PFA thicknesses in order to limit the permeability rate.

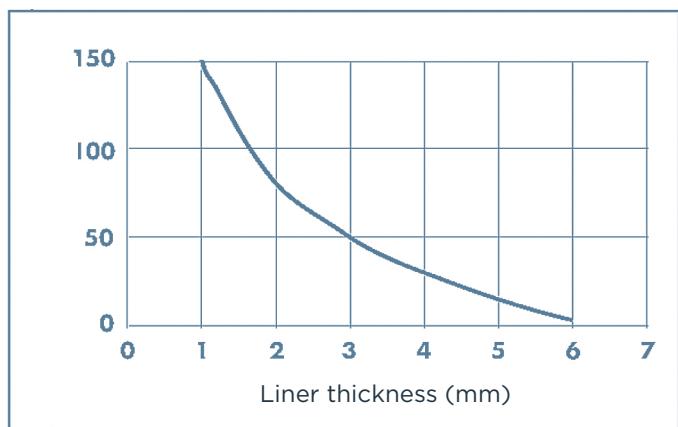

OPTIMIZING THE LINER THICKNESS - PERMEABILITY

SEVERAL FACTORS HAVE AN INFLUENCE :

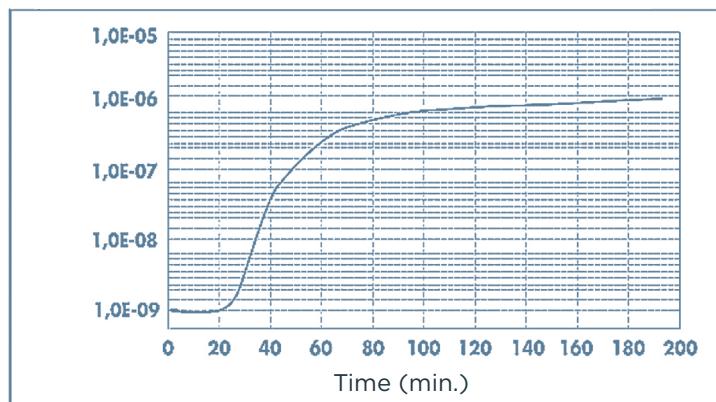

- ▶ **Thickness of the liner is the most significant factor.** The chart below shows the sharp decrease of permeability versus thickness.
- ▶ **Size of the ions or molecules :** the Helium permeability curve shows the ability of a very small molecule such as helium to pass through the PTFE / PFA.
- ▶ **Chemical nature of the product :** any chemical similarity between the material passing through and the material passed through increases permeability.
- ▶ **Temperature and pressure:** permeability increases with temperature and pressure.

EXAMPLES OF PERMEABILITY CURVES :

PTFE / PFA permeability curve

Helium permeability PTFE / PFA curve

STEEL PARTS

COMPONENTS

The table below shows the various steel components used for manufacturing our standard pieces.

3.1 mill certificates in accordance with EN 10204 are available on request.

ASTM compliant steel grades, low temperature or stainless steel grades can be supplied on request. Please contact us for more information.

| DESCRIPTION | PIPES / BODIES | | FLANGES | |
|---------------------|----------------------|--|----------------------|---------------------|
| | DIMENSIONAL STANDARD | GRADE | DIMENSIONAL STANDARD | MIN. GRADE |
| SPOOLS | EN 10217 | P 235 GH / EN 10217 | EN 1092-1 | P 250 GH / EN 10222 |
| ELBOWS | EN 10253 | P 235 GH / EN 10217 | EN 1092-1 | P 250 GH / EN 10222 |
| TEES AND CROSSES | EN 10217 | P 235 GH / EN 10217 | EN 1092-1 | P 250 GH / EN 10222 |
| CONCENTRIC REDUCERS | EN 10253 | P 235 GH / EN 10217 | EN 1092-1 | P 250 GH / EN 10222 |
| REDUCING FLANGES | | | EN 1092-1 | P 265 GH / EN 10028 |
| SPACERS | | | | P 265 GH / EN 10028 |
| INSTRUMENT TEES | EN 10217 | P 355 NH / EN 10216 - P265GH /EN 10028 | EN 1092-1 | P 250 GH / EN 10222 |

WELDING

Welds are prepared by EN and ASME-qualified welders and processes such as GMAW, FCAW, GTAW and SAW. Quality of welds meets the requirements of the EN ISO 5817 level B standard.

VENT HOLES

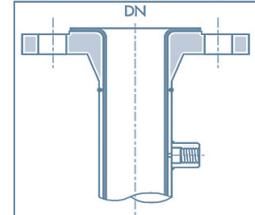

THE STEEL PARTS OF THE PTFE / PFA LINED FITTINGS ARE DRILLED WITH VENT HOLES IN ORDER TO :

- ▶ Prevent any back pressure between the metallic housing and the liner.
- ▶ Detect any leakage during pressure tests.
- ▶ Quickly detect any sign of corrosion.

Spools with length below 500 mm have one 3 mm diameter vent hole in the middle of the piece. Those above 500 mm are fitted with two vent holes located about 150 mm from each end. The fittings have at least one 3 mm diamander vent hole. Reducing flanges, blind flanges and spacers do not have any vent holes. In the case of particular specifications or thermal insulation piping, vent bosses can be welded to the vent holes.

VENT BOSSES

If vent holes must be identified quickly or when the piping is thermal insulated, a coupling can be welded on to the vent holes. In the case of different thermal insulation thicknesses, an extension stem can be screwed on to the coupling.

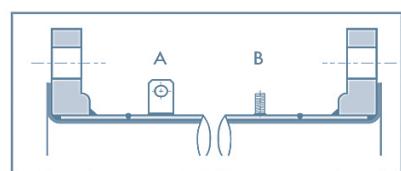

ELECTRICAL CONTINUITY

The electrical continuity of lined piping can be ensured by connecting each individual component together by using conductors linked to earthing lugs.

The latter are welded in the middle of the steel part for fittings and spools below 500 mm long and at about 150 mm from the back side of each flange for spools above 500 mm long.

Types A or B earthing lugs can be proposed on request. Standard materials are 304 or 316 stainless steel grades.

Other materials can be supplied on request.

PAINTING

The standard coating is a 60 µm minimum thick zinc epoxy primer coating on sand blasted steel, in accordance with the S.A 2.5 cleanliness level. Other surface preparations, undercoats or topcoats can be applied on request.

LINED COMPONENTS

DIMENSIONAL TOLERANCES

The lined pieces and their dimensions are indicated in pages 15 to 30.
All the lined pieces are built using the following tolerances :

| | DIMENSION | DIMENSIONAL TOLERANCE | ANGULAR TOLERANCE |
|-----------|----------------|-----------------------|-------------------|
| LENGTHS | 0 - 315 mm | +0; -3 mm | ± 0.5° |
| | 315 - 1000 mm | +0; -4 mm | ± 0.5° |
| | 1000 - 6000 mm | +0; -5 mm | ± 0.5° |
| DIAMETERS | DN 25 - 100 | +0; -3 mm | ± 0.5° |
| | DN 125 - 200 | +0; -4 mm | ± 0.5° |
| | DN 250 - 600 | +0; -5 mm | ± 0.5° |

Tolerance for PTFE / PFA : 5%

TEMPERATURE CYCLE TESTS

The pieces tested undergo 100 alternate steam / cold water cycles, according to the ASTM F1545 standard.
Steam is absorbed by the liner under the influence of both temperature and pressure.
Vacuum resistance of the liner is then proved due to significant mechanical stresses caused
by the sudden pressure drop combined with fast cooling.

VACUUM RESISTANCE

| | | | | | | | | | | | | | | | |
|------------|---------------------|----|----|----|----|----|----|----|-----|-----|-----|-----|-----------------|-----|-----|
| DN | 15 | 20 | 25 | 32 | 40 | 50 | 65 | 80 | 100 | 125 | 200 | 250 | 300 | 350 | 400 |
| ARMYLOR® G | | | | | | | | | | | | | no vacuum | | |
| ARMYLOR® V | Vacuum 2 Torr 200°C | | | | | | | | | | | | 2 Torr 100°C | | |

Units : 760 Torrs = 760 mmHg = 1 bar = 1 kg/cm² = 10⁵ Pa = 14.7 Psi

QUALITY CONTROL

INSPECTIONS AND TESTS PROGRAM

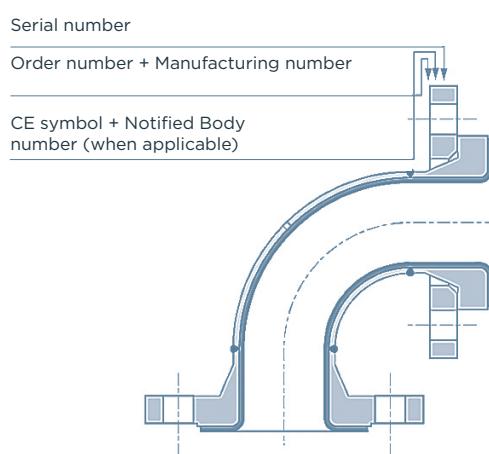

MERSEN manufactures PTFE-lined piping and fittings compliant with the European Pressure Equipment Directive 2014/68/UE. Type agreements are awarded by Mersen's Notified Body for the whole range of ARMYLOR® products. In addition to assessments carried out by Third Parties and continuous internal audits, a complete inspection and tests program is set during the entire manufacturing process :

- **Raw material (fluoropolymers)** : acceptance criteria at receiving inspections, physical properties of the liners monitored throughout the manufacturing process...
- **Spark tests are performed on each PTFE and PFA-lined piece in the following conditions :** voltage of $5000^* E$ (E = thickness of liner in mm) with a maximum of 25000 V.
- **Dimensional and visual examination of the liners and steel parts :** the weld aspect, the overall dimensions, the size of the collars, the liner thickness, the absence of surface defects and the painting thickness are checked.
- **Non-destructive examinations** are carried out when required by the applicable standards or on request. RT and PT are performed by level II qualified personnel.
- **Pressure tests** : depending on the lining process, a hydrostatic or a pneumatic test is performed. A hydrostatic test is performed on pieces fitted with vent holes, injected or produced from tubes.

TRACEABILITY AND MARKING

IN ADDITION TO THE INSPECTIONS AND TESTS PROGRAM, A FULL TRACEABILITY SYSTEM OF MATERIALS IS IMPLEMENTED :

- **Steel parts** : a coded marking system with unique traceability to the mill certificates is used. Marking transfers by Mersen qualified personnel are approved by Mersen's Notified Body.
- **Finished product** : in addition to the identification label stucked on each item, the following information is stamped:
 - the applicable standard
 - the lining material
 - the manufacturing year and month
 - the CE mark and Notified Body Number (when applicable)
 - the serial number
- **Traceability of documents** : total traceability is ensured with the same method for both steel and lining materials.

INSTALLATION PROCEDURE

Installation and maintenance instructions are provided in the user's manual delivered with the products. Specific items are highlighted here after.

PRECAUTIONS

The lined steel components are delivered with wooden or plastic blanks installed to protect the PTFE / PFA flange faces. Remove these protective blanks when the components are about to be connected only : they shall be refitted after each inspection and when the piece is withdrawn from the installation. Once the blanks have been removed, the greatest care is required : no contact with the ground, absence of any sharp object that could damage the liner. **Never weld on lined parts.**

CLEANING

Flared surface must be carefully cleaned prior to connection.

BOLT TIGHTENING

The assembly of PTFE / PFA lined components does not require any gaskets except when materials of different natures are being coupled or during successive assembling and dismantling operations.

TIGHTENING BOLTS :

- ▶ Insert the washers.
- ▶ Clean and grease the bolts.
- ▶ Tighten nuts by hands.
- ▶ Tighten each bolt using a torque wrench, keeping to the torque values specified in the table beside.
- ▶ Cross-tightening as with any flange connection.

Tightening torque values are given for PTFE / PFA and may vary depending on greasing and the condition of the nuts and bolts.

Values are given for PN 10 flanges. They are indicated for room temperature and must always be checked in cold conditions, after 24 hours of operation, then checked periodically.

THE TIGHTENING TORQUE VALUES INDICATED BESIDE APPLY TO :

Class 8.8 steel nuts
(resistant to 800 N/mm² rupture, elasticity limit of 640 N/mm²).

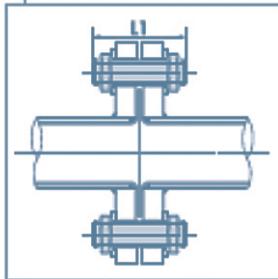

0.12. nut friction coefficient.

| DN | BOLTS mm | TORQUE N.m |
|--------|----------|------------|
| DN 25 | 4 x M12 | 30 |
| DN 32 | 4 x M16 | 45 |
| DN 40 | 4 x M16 | 60 |
| DN 50 | 4 x M16 | 80 |
| DN 65 | 8 x M16 | 100 |
| DN 80 | 8 x M16 | 60 |
| DN 100 | 8 x M16 | 70 |
| DN 125 | 8 x M16 | 90 |
| DN 150 | 8 x M20 | 130 |
| DN 200 | 8 x M20 | 180 |
| DN 250 | 12 x M20 | 160 |
| DN 300 | 12 x M20 | 210 |
| DN 350 | 16 x M20 | 260 |
| DN 400 | 16 x M24 | 330 |
| DN 450 | 20 x M24 | 290 |
| DN 500 | 20 x M24 | 330 |
| DN 600 | 20 x M27 | 460 |

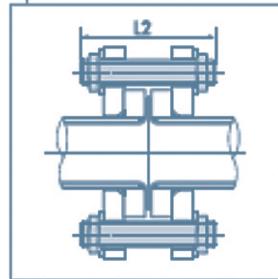

BOLT LENGTHS

The table below specifies the recommended lengths of threaded stems for the various assemblies.

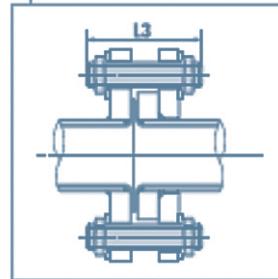

FIXED F. / FIXED F.

LOOSE F. / LOOSE F.

FIXED F. / LOOSE F.

THE DIMENSIONS INDICATED REFER TO :

- ▶ A **tightening torque equal** to 1/3 the diameter of the threaded stems.
- ▶ A **nut height equal** to the diameter of the threaded stems.

VENT HOLES

Vent holes must not be obstructed by thermal insulation or painting. Where thermal insulation is fitted, vent extensions should be provided. When pipes are operated for the first time, air or water trapped inside at the moment of assembly may escape through the vent holes. It is recommended, during periodic inspection, to check that no trace of leakage is visible around the vent holes. The latter also act as corrosion indicators.

WEIGHT

The weight (kg) of each piece is indicated on the corresponding tables. Due to the various construction methods, the weights are typical values only. The tolerance is +/- 10%.

SUPPORTS

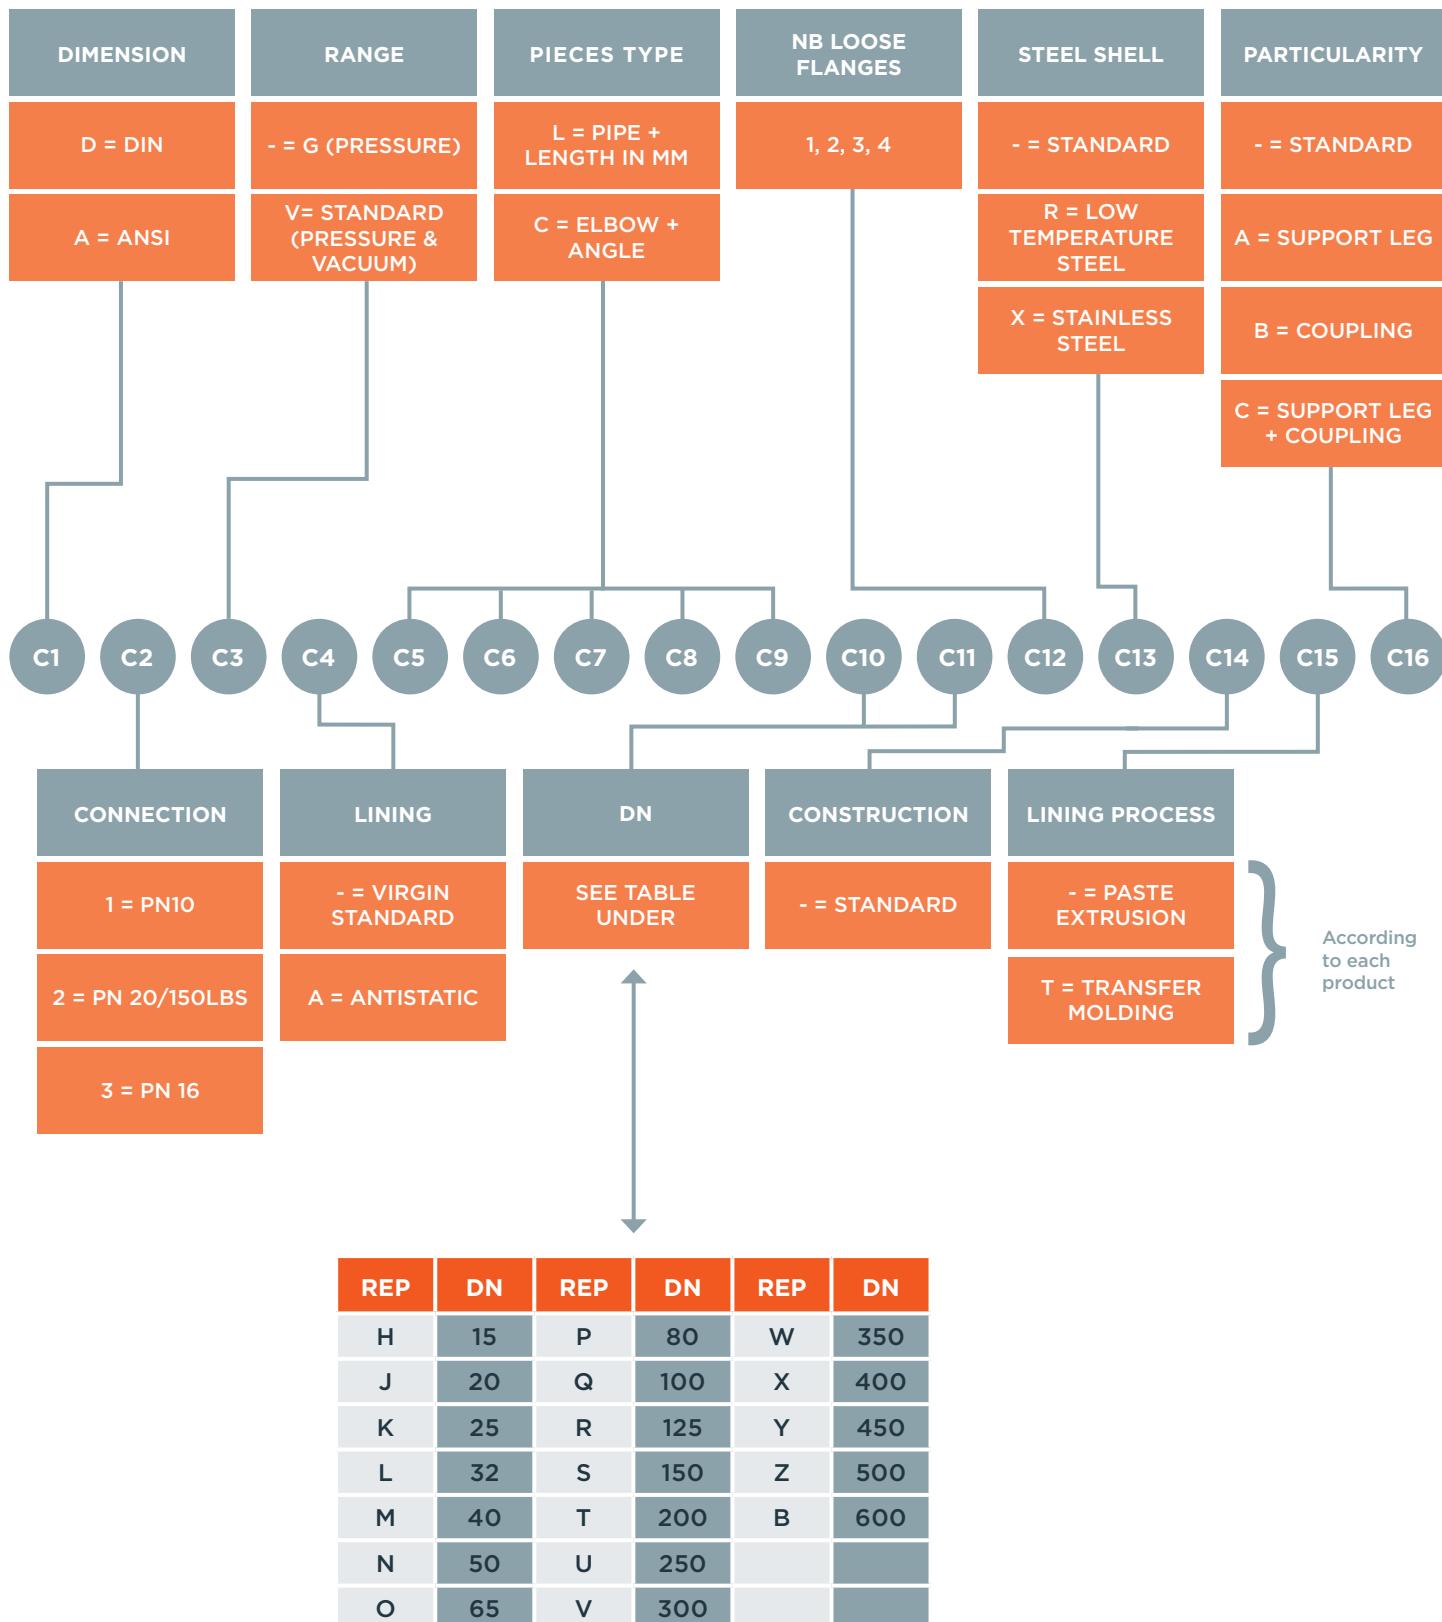

Elements must be supported using collars that are not welded on the lined piping. **Never weld on lined parts.** However, supporting elements may be welded prior to lining.

| DN | L1 mm | L2 mm | L3 mm |
|--------|----------|----------|----------|
| DN 15 | 75 | 95 | 85 |

| DN 450 | 170 | 205 | 175 |
| DN 500 | 170 | 230 | 190 |
| DN 600 | 170 | 235 | 190 |

CODING SYSTEM AND REFERENCES

Each element has its own unique reference which allows its identification.

This reference is composed on 16 alphanumeric characters. In some cases, the character can be «-» if refers to standard. The references that are mentioned in the dimensional tables are the standard ones.
